

My Magic Map AGI

Body-controlled places. Radeon-created memories. Radeon-understood discoveries.

THE VALUE

Explore Google Street View and 3D Maps by walking, steering, flying and pointing with the body.

- Accessible, hands-free world exploration
- Real-place artwork and postcards
- Personal and family virtual memories
- Pointed-object identification and collection
- Geographic learning through embodied interaction

Innovation: one product connects physical gestures, real-world geography, privacy-preserving local tracking, Radeon image generation and Radeon semantic vision.

HOW AMD POWERS IT

- 1

REAL PLACE
Street View scene selected by the user
- 2

SECURE API
Express validates and routes the explicit request
- 3

RADEON ROCM
PyTorch/HIP runs SDXL or Qwen2.5-VL
- 4

USEFUL RESULT
Artwork, postcard, memory or object identity

Privacy boundary: webcam frames remain local. Only a user-selected map scene reaches the authenticated Radeon bridge. ComfyUI stays loopback-only.

MEASURED ON RADEON

11.981 s Warm SDXL image average

7.089 s Warm Qwen vision average

24.00 GiB Peak VRAM, both services resident

48 GiB gfx1100 Radeon workspace

ROCM 7.2.1 | PyTorch 2.9.1+rocm7.2.1 | SDXL base 1.0 | Qwen2.5-VL-3B-Instruct BF16

OpenAI provides live voice and availability/identity fallbacks. Gemini is not used.

FUNCTIONAL COMPLETENESS

Body input -> real map scene -> Radeon inference -> visible and saved artifact
